## REMARKS/ARGUMENTS

Reconsideration and withdrawal of the rejections of the application are respectfully requested in view of the amendments and remarks herewith, which place the application into condition for allowance. The present amendment is being made to facilitate prosecution of the application.

#### I. STATUS OF THE CLAIMS AND FORMAL MATTERS

Claims 1-18 are pending. Claims 1, 2, 5, 8, 13, 14, 17, and 18, h are independent. Claims 1-5, 7-11, 13, 17 and 18 are hereby amended. Claims 15 and 16 are canceled without any prejudice and disclaimer to the subject matter.

No new matter has been introduced. It is submitted that these claims, as originally presented, were in full compliance with the requirements of 35 U.S.C. §112. Changes to claims are not made for the purpose of patentability within the meaning of 35 U.S.C. §101, §102, §103, or §112. Rather, these changes are made simply for clarification and to round out the scope of protection to which Applicants are entitled.

### II. REJECTIONS UNDER 35 U.S.C. §101 and §102(e)

Claims 15-16 were rejected under 35 U.S.C. §101 as allegedly directed to nonstatutory subject matter.

Claims 1-18 were rejected under 35 U.S.C. §102(e) as allegedly anticipated by U.S. Patent No. US 7,099,288 to Parker et al. (hereinafter, merely "Parker").

### III. RESPONSE TO REJECTIONS

Claim 1 recites, inter alia:

"A network system, comprising:

... wherein said client terminal generates a request message that contains an IP address of said client terminal, and said client terminal sends the request message to said host terminal via a transmission mail server,

wherein said host terminal acquires the request message via a reception mail server, said host terminal extracts the IP address of said client terminal from a description content of the request message, said host terminal stores the extracted IP address in a table, said host terminal selects at least one IP address from the table and generates a reply message containing the selected at least one IP address, and said host terminal sends out the reply message to said client terminal via the transmission mail server." (Embhasis added)

As understood by Applicant, Parker relates to a user system that uses a called number to establish a telephone call over a public telephone network to a called party. In response to the telephone call, the user system transfers a data call request to a server system over a public data network. The server system uses the called telephone number to check a database to determine if the called party is ready to receive data calls. If the called party is ready and accepts the data call, the server system exchanges computer data between the caller and called parties over the public data network.

First, Applicant submits that Parker fails to disclose or suggest the transmission mail server as claimed in claim 1, "wherein said client terminal generates a request message that contains an IP address of said client terminal, and said client terminal sends the request message to said host terminal via a transmission mail server", (emphasis added). The Office Action (see pages 3 and 4) cites column 2, lines 4-5 of Parker, "mail server with an easy to remember domain name acts as intermediary between two individual users", to disclose the transmission

Frommer Lawrence & Haug LLP 745 Fifth Avenue New York, NY 10151 212-588-0800 mail server of Applicant's. Applicant submits that Parker's mail server with an easy to remember domain name also servers as the central server as disclosed in column 4, lines 10-15 of Parker (central server with logical name such as www.sprint.exchange.com) in contrast with Applicant's transmission server is separate from the host terminal. Applicant respectfully submits that Parker fails to anticipate the above-identified features of claim 1.

Therefore, Applicant submits that independent claim 1 is patentable.

Second, Applicant submits that Parker fails to anticipate "said host terminal stores the extracted IP address in a table", as recited in claim 1 (emphasis added). The Office Action (page 4) cites unit 30 in Figure 3 to disclose "said host terminal stores the extracted IP address in a table". Applicant submits that Parker's server adds new users to the database or updates user status upon registration message in contrast with Applicant's host terminal that stores the extracted IP address upon receiving a request for peer-to-peer communication. Applicant submits that Parker does not teach or suggest the above-identified features of claim 1.

Therefore, Applicant submits that independent claim 1 is patentable.

Furthermore, Applicant submits that Parker fails to anticipate "sends the reply message to said client terminal via the transmission mail server", as recited in claim 1 (emphasis added). The Office Action (page 4) cites unit 31 in Figure 3 of Parker to disclose the above-identified features of claim 1. Applicant submits that unit 31 in Figure 3 of Parker generates an initial message that is forwarded to the desired users in contrast with Applicant's reply message is sent back to the client terminal which requesting a peer-to-peer communication. Applicant submits that Parks fails to anticipate the above-identified features of claim 1.

Therefore, Applicant submits that independent claim 1 is patentable.

Frommer Lawrence & Haug LLP 745 Fifth Avenue New York, NY 10151 212-588-0800 For reasons similar to or somewhat similar to those described above with regard to independent claim 1, independent claims 2, 5, 8, 13, 14, 17, and 18 are also believed to be patentable.

Therefore, Applicant submits that independent claims 1, 2, 5, 8, 13, 14, 17, and 18 are patentable.

#### IV. DEPENDENT CLAIMS

The other claims are dependent from one of the independent claims discussed above, and are therefore believed patentable for at least the same reasons. Since each dependent claim is also deemed to define an additional aspect of the invention, however, the individual reconsideration of the patentability of each on its own merits is respectfully requested.

# CONCLUSION

In the event the Examiner disagrees with any of statements appearing above with respect to the disclosures in the cited references, it is respectfully requested that the Examiner specifically indicate those portions of the reference, or references, providing the basis for a contrary view.

Please charge any additional fees that may be needed, and credit any overpayment, to our Deposit Account No. 50-0320.

In view of the foregoing amendments and remarks, it is believed that all of the claims in this application are patentable and Applicants respectfully request early passage to issue of the present application.

Respectfully submitted,

FROMMER LAWRENCE & HAUG LLP Attorneys for Applicant
